

Design-Build Excellence

“We’ll be able to continue for the next 10, 20, 30 years and get even better at it.”

Ryan Callaghan, President & CEO

At RP Constructors, we don’t just understand the complexities of industrial and heavy civil construction; we engineer solutions that make building faster, smoother, and more cost-efficient.

Partnering with our sister company, Civil Engineers & Constructors (CEC), we combine design and construction expertise under one roof, ensuring your project stays ahead of schedule and within budget.

Our Approach

We know the pressure of meeting deadlines, because we’ve been on both sides.

By keeping surveying, engineering, and construction in-house, we remove the friction that slows projects down. Our surveyors know exactly what the engineers need, and our engineers design with the constructors’ realities in mind. This collaboration means fewer surprises, fewer change orders, and more efficient builds.

MUNICIPAL / GOVERNMENT

Public projects require proven reliability, financial stability, and an excellent safety record. We bring all three—along with a commitment to using taxpayer dollars wisely—delivering complete, accurate proposals and a better construction experience.

INDUSTRIAL

We reject the “low-bid, high-change-order” game that too often plagues industrial construction. Instead, we invest in thoughtful engineering upfront, saving owners significant costs during construction and avoiding last-minute surprises.

PRIVATE / COMMERCIAL

For private-sector projects, we deliver turnkey solutions designed to keep your business moving. We handle surveying, engineering, and construction in-house for maximum efficiency and streamlined project completion.
